External Wall Insulation FOR YOUR HOME.

EXCITING NEWS!

We're looking at ways to improve homes across our communities, and your home may be suitable for External Wall Insulation (EWI).

This upgrade helps keep heat inside your home, lowers energy bills and supports a healthier living environment.

What External Wall Insulation Does

External Wall Insulation adds a new layer to the outside of your home.

It keeps warmth in, reduces cold spots, and gives your home a fresh new look.

A warm, safe home is the foundation of good health and EWI helps protect that.

Assessing your home

We will need to check if your home is suitable for installing EWI.

Before anything starts, we'll do a short survey.

This helps us understand:

- The condition of the external walls
- What preparation work is needed•
- The most suitable insulation and finish for yourhome

We'll always explain what to expect and keep you updated.

What Happens During Installation

If your home is suitable, Tai Calon or one of our approved installers will talk you through the process.

Getting the Walls Ready

We clean and repair the walls so they're ready for the insulation. Adding the Insulation - Insulation boards are installed on the outside of your home to help prevent heat from escaping.

Protective Finish

A weatherproof render is added on top. This protects your home and gives it a new, modern appearance.

Final Checks

We tidy up, complete any final details, and make sure everything is finished to a high standard.

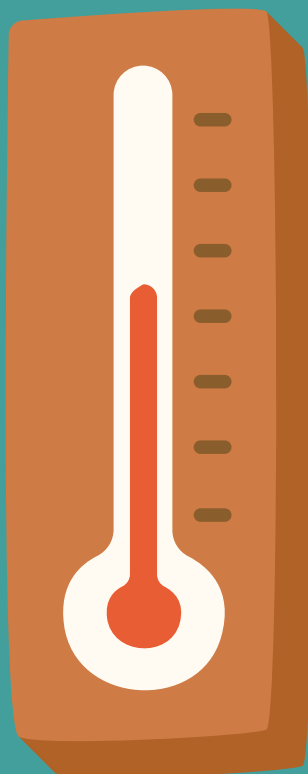

What You Can Expect After the Work

Your home will feel warmer, healthier, and more comfortable.

You'll use less energy, save money on heating, and enjoy a refreshed exterior.

By creating healthier homes, we support healthier lives. Homes where people can live in comfort and peace of mind.
